

PROJECT ATLAS

ATLAS-DES-005: OPERATOR CONSOLE (AVIONICS INTERFACE)

1. Interface Philosophy: The "Glass Cockpit"

In accordance with the **IT Director's preference**, the operator UI shall abandon standard OS widgets in favor of high-contrast avionics-style components. This ensures maximum legibility in high-glare environments (flightlines).

2. Visual Encoding Standards

State	Primary Color	Background	Meaning
IDLE	#CCCCCC (Grey)	#121212	System waiting for data.
VALID	#FFA500 (Amber)	#121212	Parameters okay. Ready to Arm.
ACTIVE	#00FF00 (Green)	#121212	Heat in progress.
ERROR	#FF0000 (Red)	#121212	Validation failed.

3. Interaction Design

- Touch Optimized:** Minimum target size of 50x50 pixels for all interactive elements.

- **Direct Entry:** Numeric keypads will spawn for time/heat entry to avoid keyboard reliance.
- **State Lock:** All inputs are disabled ("Greyed out") while a heat is ACTIVE to prevent accidental changes.
- **Traceability:** Every parameter change is logged for post-mission analysis.
