

PROJECT ATLAS

ATLAS-DES-004: PUBLIC DISPLAY (LED MATRIX) UX DESIGN

1. Visual Hierarchy

The public display is optimized for pilots at distance. High contrast and static positioning are mandatory to ensure readability during movement.

2. Specification of Elements

Element	Color (Hex)	Typeface	Function
Real-Time Clock	#FFFFFF	Monospace	Current PC Time
Insertion Window	#00FF00	Monospace Bold	Time remaining to enter track
Heat Countdown	#FF0000	Monospace Bold	Active race time remaining
Separator Band	Dynamic	Solid Fill	Visual phase indicator (UR-015)

3. Rendering Strategy

The `AtlasRenderer` will use **QPainter** for hardware-accelerated drawing. This avoids the overhead of standard button widgets and allows for pixel-perfect alignment on the LED HUB75 interface.
