# ATLAS-DOC-001

Document Status Register

| | |
|---|---|
| **Project** | ATLAS Master Flightline Clock |
| **Document ID** | ATLAS-DOC-001 |
| **Version** | 1.0 |
| **Date** | July 2026 |
| **Status** | CURRENT AUTHORITATIVE |

## 1. Purpose

This register defines the status of all major ATLAS project documents. It identifies which documents are current and authoritative, which are useful historical references, and which have been superseded in whole or in part by newer documentation or by the current codebase.

> When in doubt about which document to trust, consult this register first.

## 2. Current Truth Precedence

When documentation conflicts with the live codebase or with other documents, the following precedence applies:

1. Validated current source code
2. Current deployment-verified runtime behaviour
3. Current authoritative documents (marked CURRENT in this register)
4. Formal reference documents still aligned with the code
5. Historical documents (marked HISTORICAL in this register)

## 3. Status Key

| Badge | Meaning |
|---|---|
| CURRENT | Authoritative and up to date. Use this document. |

| | |
|---|---|
| NEEDS REVISION | Still useful but contains sections that require updating. |
| HISTORICAL | Useful as a milestone or reference record. Not current truth. |
| SUPERSEDED | Replaced by a newer document. Do not use as current reference. |

## 4. Document Register

| Document | ID | Status | Notes |
|---|---|---|---|
| README (updated July 2026) | README_ATLAS | CURRENT | Current repository overview. Replaces the original README which stated no production code had been written. |
| Current Architecture and System Status | ATLAS-ARC-001 | CURRENT | Defines the current implemented architecture. Primary reference for system structure and data flow. |
| Actual System Review v2 | ATLAS-ASR-001 v2 | CURRENT | Based on direct inspection of live codebase July 2026. Supersedes v1. |
| Deployment Guide v2 | ATLAS-DEP-001 v2 | CURRENT | Current deployment philosophy and macOS deployment method. Windows deployment |

| | | | |
|---|---|---|---|
| | | | process to be added. |
| Document Status Register | ATLAS-DOC-001 | CURRENT | This document. |
| Project Handover Dossier (July 26, 2026) | ATLAS_PROJECT_HANDOVER_Sun_26_July | CURRENT | Best current narrative handover source. Comprehensive context for any new assistant or developer picking up the project. |
| Interface Control Document | ATLAS-ICD-001 | NEEDS REVISION | Interface philosophy, display contract, backend abstraction, and 6-row layout logic remain authoritative. Needs update for dual-backend reality and future hardware procurement details. |
| Architecture Recommendation | master_flightline_clock_architecture_recommendation | HISTORICAL | Original architectural intent and design philosophy. Partially superseded by current implementation. Retain as design history. |

| | | | |
|---|---|---|---|
| Progress Status Log | ATLAS-LOG-002 | HISTORICAL | Phase 0 milestone snapshot. Useful as a progress record. Not current operational truth. |
| Actual System Review v1 | atlas_actual_system_review (1) | SUPERSEDED | Replaced by ATLAS-ASR-001 v2. Earlier review reflected a simulator-only, pre-LCD-backend system state and contained some incorrect findings regarding fonts.py. |
| Deployment Guide v1 | ATLAS-DEP-001 v1 | SUPERSEDED | Replaced by ATLAS-DEP-001 v2. Retain as historical reference. |
| README (original) | README.md (original) | SUPERSEDED | Stated "no production code has yet been written" and referenced Python 3.13. Replaced by updated README. |

## 5. Documents Planned / In Progress

| Document | Proposed ID | Status |
|---|---|---|
| Windows Deployment Process | ATLAS-DEP-002 | In progress |
| Field Installation Checklist | ATLAS-DEP-003 | Planned |
| Post-Deployment Verification Procedure | ATLAS-DEP-004 | Planned |
| ICD Revision for Dual-Backend | ATLAS-ICD-001 v2 | Planned |
| Physical Hardware Integration Guide | ATLAS-HW-001 | Future |

## 6. Document Retention Policy

Historical and superseded documents should be retained in the project `docs/` directory for traceability. They should not be deleted, but should be clearly identified as historical or superseded via this register and via a header note on the document itself where practical.

> Retaining historical documents is good engineering practice. They provide traceability, design rationale, and context for future developers and assistants picking up the project.
